USE CASE

Sell the judgement, not the legwork

Aribot does the first pass on threat models and cloud reviews in minutes, so your consultants spend their days on the advice clients pay for.

THE PROBLEM

A consultancy sells threat modeling, cloud reviews and compliance projects.

Senior people spend days drawing diagrams and chasing evidence, margins shrink, and clients want results faster.

WHY IT MATTERS NOW

Who asks for this

- Practice Lead
- Principal Consultant
- Managing Director

HOW ARIBOT HANDLES IT

1 **Run the first pass**
Generate the threat model and the cloud posture scan for each client.

2 **Review together**
Several consultants work on one model, with disagreement kept on the record.

3 **Build it into delivery**
Call Aribot from your own tooling through the API and SDKs.

4 **Bill per engagement**
Per-action pricing fits project billing, with clients kept separate.

WHAT YOU GET

- Threat models and cloud reviews in a fraction of the time
- A new AI-assurance service line built on agent governance
- Your tooling on top of the Aribot API
- Pricing that fits project work

SEE IT IN THE DEMO

- Collaborative Threat Modeling: several reviewers at once
- Cloud Accounts: read-only client connections
- MCP Platform: the same capabilities from your own tools
