

USE CASE

What Aribot is building next, by buyer problem

A preview of the problems Aribot is working on next, such as proving a fix worked and matching machine access to what is actually used.

THE PROBLEM

Every vendor on our shortlist claims automated remediation, and every demo ends when the fix is submitted. Our machine identities have built up access nobody can justify. Our posture report can't tell a tested control from one nobody looked at.

HOW ARIBOT HANDLES IT

- 1 Tell us the problem**
Describe your current pain, for example that you cannot prove a fix worked.
- 2 Match it to the roadmap**
We show where it fits among the areas in progress.
- 3 Technical session under NDA**
Design detail is covered in a walkthrough once an NDA is signed.
- 4 Scoped early access**
An agreed pilot runs in your own estate.

WHAT YOU SEE IN THE DEMO

- Outcome cards for verified outcomes, authority that matches use, and answers that admit what is unknown
- Links from each area to the demo that shows it, including AI Remediation, Agent Assurance and CXO Workbench
- A path from problem statement to NDA session to scoped pilot
- A Research Preview badge on the page

WHO IT IS FOR

- CISO
- Security Architect
- Internal Audit IT Manager

WHAT YOU GET

- A view of the problems in active development, described by outcome
- Pointers to the live demos where each outcome can be seen
- A route to a technical walkthrough under NDA
- A scoped pilot in your own estate
